

Delta Defend Security Services

Delta Insurance Australia has proudly partnered with CyberGrape to offer Delta Defend.

A comprehensive pre-loss cybersecurity services designed to help organisations identify, assess, and mitigate potential risks before a cyber incident occurs.

By integrating services like employee staff awareness training, vulnerability assessments, SaaS backups, WAF protection, and password management, businesses can stay ahead of cyber threats, reduce the likelihood of an attack and maintain operations.

WHY CHOOSE DELTA DEFEND?

Proactive Approach

Unlike traditional cybersecurity strategies that react to incidents, Delta Defend helps identify vulnerabilities and address them before a breach happens, preventing costly downtime and reputational damage.

Tailored Solutions

Services are customised to meet the unique needs and challenges of your business.

Expert Team

Delta Defend's team of cybersecurity experts at CyberGrape, leverages the latest technologies and industry best practices to safeguard your data, systems, and operations against emerging cyber threats.

KEY SERVICES OFFERED

Employee Training & Awareness Platform (first 5 users are free)

- Comprehensive cybersecurity training for staff to recognise and avoid common threats like phishing and social engineering.
- Access to over 100, ISO 27001 accredited training courses

Free Cloud Monitoring

- 30-day free SaaS / IaaS Cloud mis-configuration monitoring services for up to 3 cloud services of the Policyholders choice
- Designed to help organisations identify, assess, and mitigate potential security risks arising from misconfigurations in their cloud environments.

Free 1-hour cyber security advisory services

- Schedule a consultation to assess your organisations unique cybersecurity risks.

Free Cloudflare WAF Protection

- Cloudflare WAF offers real-time protection by filtering and monitoring HTTP traffic between your web application and the Internet.

KEY SERVICES OFFERED (CONTINUED)

Discounted SaaS Backup Services

➤ SaaS Backup Services are designed to protect data stored within Software-as-a-Service (SaaS) applications, which are increasingly used by organisations for collaboration, productivity, and customer relationship management. While SaaS providers like Microsoft 365, Google Workspace, Salesforce, and others offer robust security features, they do not typically provide comprehensive backup solutions for data within these platforms.

Discounted Tenable Vulnerability Assessments

➤ Is a comprehensive service that helps organisations identify, assess and remediate security vulnerabilities across their IT infrastructure. By using advanced scanning technology, Tenable enables organisations to proactively address weaknesses in their networks, systems, and applications, minimizing the risk of a successful cyberattack.

➤ The first 30-day trial period is free.

Discounted Bitwarden Password Vault

➤ Bitwarden offers a powerful solution to enhance your organisation's password security and reduce the risk of data breaches due to weak or compromised credentials.

Did you know:

90% of successful data breaches involve human error

36% of successful data breaches involve phishing

A cyber crime is reported every **6 minutes**
